

United Transportation Group

Storm Water Pollution Prevention Plan

Facility

United Transportation Group is located at 1150 East 145th Street in East Chicago Indiana.

Site Activities

United Transportation Group consists of a chemical tank wash, a chemical railcar wash, Waste Water treatment facility, railcar storage, and trans loading. The facility operates from 7am – 12 am 5 days a week and is staffed by 20 employees.

Site Description

United Transportation Group is located on approximately 27 acres. There are 5 buildings on site that United Transportation Group (UTG) uses. From South to North: Tanker Services (TSI) is a tank cleaning operation. The blue warehouse is used for equipment storage and wash bay. Waste Water Treatment (WWT) operations building is where railcar washing and water treatment take place. The Office building is the administration building and also contains the boiler, locker room and maintenance facilities. The Compressed Gas building is where the compressed gas cars are flared and treated. The drum warehouse is where all containerized product is placed for disposal/ pick-up. These areas comprise roughly 4 acres with another 13 acres dedicated to railcar storage and the final 10 acres as undeveloped concrete areas.

All chemical and non-chemical washes and heel removal activities take place over concrete areas. These concrete areas, as well as the buildings on them, drain directly in to containment pits that are pumped or vacuumed into the Waste Water Treatment process (see United Transportation Group Centralized Waste Treatment, Waste Water Flow Process for more information). All water is then treated and tested by United Transportation Group and the City of East Chicago Sanitary District. The City of East Chicago routinely tests samples of the water at United Transportation Group.
